Hiring Manager
MaintainX

Dear Hiring Manager,

The Senior Full-Stack Developer role at MaintainX aligns perfectly with my 9+ years of experience building scalable applications and leading technical teams. My background in modernizing no-code platforms and enterprise systems directly matches your need for someone who can work across your full stack while bringing a product mindset to industrial workflow challenges.

At MethodCRM, I'm currently leading a team of 5 developers modernizing a no-code platform using React/TypeScript frontend with .NET/C# backend — experience that translates directly to your TypeScript, React, and Node.js stack. My role as REST API Subject Matter Expert at Cambridge Global Payments, where I led weekly API reviews and built customer-facing integrations, demonstrates the GraphQL and API design skills needed for your collaborative features. Additionally, I've mentored 8+ engineers at Carta through regular 1:1s and performance reviews, directly addressing your mentorship requirements.

I'm immediately available and eager to contribute to MaintainX's mission of empowering frontline workers with mobile-first solutions.

Sincerely,

Benjamin Grady
