Hiring Manager  
Rockstar Games

Dear Hiring Manager,

I am applying for the Senior Frontend Engineer position at Rockstar Toronto. With 9+ years of full-stack development experience and deep expertise in React/TypeScript, I bring proven leadership in modernizing complex user-facing platforms for high-scale applications.

At MethodCRM, I currently lead a team of 8 professionals modernizing a no-code screen designer platform using React/TypeScript frontend architecture, managing backwards compatibility across all customer components while architecting clean migration paths. My experience at Cambridge Global Payments included building customer-facing API portals and implementing real-time features like Firebase push notifications for mobile apps, directly relevant to online gaming services. Additionally, I developed Visual Studio plugins and dockerized analytics services, demonstrating the technical versatility needed for game development tooling.

I am available immediately and eager to contribute to Rockstar's online gaming ecosystem with my proven track record in scalable frontend development and team leadership.

Sincerely,

**Benjamin Grady**
